

Accelerated Experiential Learning(AEL)

Abstract

This patent describes the process and application of Accelerated Experiential Learning (AEL). AEL is a process for extracting key information sets used by experts to make decisions and produce solutions. The chunked data sets are presented to the learner using an electronic delivery methodology to provide the extracted associated information sets to novices allowing them to gain dramatically in the associated information from which the experience was derived. The associated or chunked data allows the learner's brain to develop or refine the reference information and use it within minutes. The process elevates the performance of the learner as if they had acquired the same experience in a standard trial and error fashion of months or years. The process produces new internalized usable experience unavailable through any other means besides the common development of experience through trial and error over time.
